INTRODUCTORY CHEMISTRY

STUDY TIPS

• Don’t fall behind! Reviewing the things you learn each day will help you stay up to date with the material.
• Create your cheat sheet for the exams early so that you can focus on the important topics for that exam.
• Utilize your resources! PILOT, Learning Den, and Office Hours all help with confusing topics and allow you to practice problems.
• GO TO CLASS! Attending class is essential for learning the material.
• In class, try your hardest to understand the Clicker Questions, since they usually connect with the material.
• Though the textbook isn’t required, it can sometimes be useful to read certain parts of it to clarify topics that might be confusing. It also has extra practice problems.
